Education

University of California, Los Angeles (UCLA)

Expected Graduation: June 2026

GPA: 3.81 (Dean's Honors) | B.S. in Computer Science

Los Angeles, CA

- **Activities:** ACM Dev Team (Officer), Projected Dance (Director), Foundations Choreography (Events Chair), UCLA SwabSeq Lab, UPE Honor Society, Association of Chinese Americans
- **Relevant Coursework:** Operating Systems, Algorithms and Complexity, Theory of Computing, Software Construction, Digital Systems, Computer Organization, Data Structures, Multivariable Calculus, Linear Algebra, Discrete Mathematics

Monta Vista High School

August 2018 – June 2022

GPA: 4.0

Cupertino, CA

Experience

Meta | PHP, GraphQL, React, Python, SQL, Swift, Kotlin

June 2025 – September 2025

SWE Intern

Menlo Park, CA

- Built Facebook advertiser onboarding tool to monitor eligibility criteria for new features, saving 200+ total hours/month
- Led business logic changes and funnel metrics view for unreleased product experiment, analyzing 400k+ impressions
- Facilitated design and implementation of GraphQL enum migration, consolidating code across WWW, iOS, and Android

Microsoft (via Centific) | JavaScript, HTML/CSS

June 2024 – September 2024

SWE Intern

Redmond, WA

- Developed and implemented legal electronic data collection automations in nine Microsoft eDiscovery environments
- Integrated daily scheduler for automation scripts into CI/CD pipeline to optimize deployment processes
- Taught daily workshops for 10+ students on topics including HTML/CSS, JavaScript, SQL, and algorithms

UCLA SwabSeq Lab | Python, Rust

February 2024 – September 2024

Researcher

Los Angeles, CA

- Analyzed DNA sequences of 100+ patients to predict viruses present throughout genomes
- Identified likely contamination between samples using Somalier and eliminated impurities using sample pair visualizations
- Incorporated output into overarching Rust sample workflow involving pre-processing, alignment, and variant-calling

Native English Institute | TypeScript, React, MySQL, Docker, Kubernetes

June 2023 – August 2023

SWE Intern

Kobe, Japan

- Built scheduling algorithm to match 100+ student appointments with teachers per day based on priority, preferences, etc.
- Restructured teacher ranking system and integrated logic into algorithm/database, saving 10+ hours/week of admin time
- Conducted regular cron job tests using Docker and Kubernetes to ensure algorithm accuracy and reliability

ACM Dev Team | TypeScript, React, Next.js, Node.js, MongoDB

November 2022 – June 2025

Officer

Los Angeles, CA

- Developed template for automated site generation used by ACM committees and viewed by thousands of members
- Refactored MongoDB events database and redesigned user interface for membership portal with 100+ users
- Led architecture migration from React to Next.js for ACM archive project with student learning modules

Projects

Genomic Histone Overlap Predictor | Python

February 2024 - March 2024

- Implemented a Hidden Markov Model to predict overlaps of 500,000 genomic DNA intervals with histone marks
- Used Baum-Welch expectation-maximum algorithm to improve matrix parameters and refine model accuracy

Four-Year Course Planner | TypeScript, React, Express, Node.js, MySQL, Firebase

September 2023 - December 2023

- Designed user interface with drag-and-drop courses and notes for four-year plan using React/TypeScript
- Stored data and major requirements in MySQL database and created API endpoints with Express
- Integrated Firebase authentication with frontend and database for user profiles

Relevant Skills

Languages: fluent in Python, Java, PHP, GraphQL, C, C++, HTML/CSS, JavaScript, TypeScript, SQL; proficient in C#, Rust
Technologies/Frameworks: Flask, React, Express, Node.js, Next.js, MySQL, MongoDB, Firebase, Docker, Kubernetes, PyTorch
Spoken Languages: English (native), Chinese (fluent)
